

# COMmander<sup>®</sup> 8U<sub>P0</sub> Module

Extension module with 8 U<sub>P0</sub> ports for a 2-wire system to ISDN end device connection for COMmander 6000

- 2-wire connection of system telephones and ISDN terminals
- 8 U<sub>P0</sub> ports for the connection of COMfortel system telephones
- Euro-ISDN (DSS-1) PTMP connection in conjunction with the U<sub>P0</sub>/S<sub>0</sub> Adapter

---

## Your advantages in detail

The COMmander 8U<sub>P0</sub> Module equips the COMmander 6000 with eight 2-wire U<sub>P0</sub> ports. The ISDN system telephones from the COMfortel series can be connected directly to these U<sub>P0</sub> ports thanks to their

automatic U<sub>P0</sub>/S<sub>0</sub> detection. Combining it with the U<sub>P0</sub>/S<sub>0</sub> Adapter creates a standard ISDN connection at the endpoint of the 2-wire line on which COMfortel system telephones and normal ISDN terminals can be operated.

# Features at a glance
